Experience the delight of younger and smoother looking skin in just a matter of minutes with this safe, non-invasive and scientifically advanced cosmeceutical range. Dermodex™ Technology is a combination of sophisticated ingredients and GABA (Gamma Amino Butyric Acid), the body's natural muscle relaxing agent and an essential neurotransmission inhibitor. GABA appears to lower the excitatory level of the muscle cells that cause wrinkling and fine lines by numbing them, thereby reducing their appearance almost instantly. Dermodex™ Technology not only delivers immediate effects but gradual and continual results safely and far more effectively than the temporary results delivered by invasive injections, facial peels and dermabrasions.

Déjà vu is the perfect addition to any skincare range, the skin treatments can be used over the top of any moisturizer for instant results followed by a make-up application.
